CLADDING & FACADE REPLACEMENT

Non-Flammable Cladding
Cladding & Facade Replacement

SRG Global’s Facade Refurbishment division provides a complete end-to-end solution for cladding and façade rectification and replacement projects. SRG Global provide design, engineering, manufacture, access, installation, and certification services ensuring the upgraded facades meet the highest standards, removing and replacing faulty and damaged cladding.

Since the tragedy of London’s Grenfell Tower fire, there is global concern surrounding the safety of cladding products, especially aluminium composite panel (ACP) with polyethylene (PE) core. Comparisons have been drawn with Melbourne’s Lacrosse Building and the Torch Tower in Dubai, which have further focused the world’s attention on the fire safety of high-rise buildings particularly if PE cored ACP cladding has been used.

**Compliance Obligations**

It is of great concern to authorities, insurers, owners, and occupants that a vast number of buildings in Australia and throughout the world, have been identified as having flammable external cladding which severely compromises the buildings fire safety and therefore requires urgent rectification. Australian authorities, both Federal and State are legislating to require that existing buildings are audited for flammable cladding and if found it must be rectified to comply with current regulations.

Investigating, identifying, and rectifying defective facades and cladding, especially on high-rise buildings poses many challenges and risks, including assessing the true extent of works, safe access and methodology, ensuring the protection and safety of occupants and the public below or in the vicinity of work zones, minimising inconvenience all whilst undertaking the works in a timely and efficient manner. This is where the breadth of expertise and services provided by SRG Global is an advantage.

**Cladding Replacement**

SRG Global utilise compliant cladding material for all building facades. Critical elements of such projects include logistics, engineering, management, scaffolding, hoarding, public protection, traffic management, and hoisting, which are all performed by SRG Global in-house. We have extensive experience in façade installations as well as façade refurbishment projects. SRG Global has a proud history of delivering building façade installation and refurbishment projects throughout Australia.

We have worked on many large-scale complex commercial and residential projects throughout Australia’s major CBD markets. We are well equipped to undertake projects whatever the location or difficulty. Our proven track record and experience, as well as our focus on safety, quality and the environment ensures SRG Global are the right people for the job.

**Making the complex simple**

SRG Global can offer a unique end to end solution including design, engineering, manufacture, access, installation, certification, and project management for your entire façade rectification project.

Our building remediation specialists, teamed with our access division and façade installation experience ensure no project is out of reach. Whether heritage cottage or postmodern skyscraper, concrete, brick or glass, SRG Global will ensure your building asset is not only compliant, but restored to its former glory.

SRG Global is an ASX listed engineering-led construction, maintenance and mining services group with extensive industry experience in all facets required to deliver the full package of façade refurbishment works and be a partner of choice.

**What we do**

- Solve complex problems
- End to end solutions
- Detailed examination and reporting
- Design, engineering and logistics
- Replacement of faulty cladding and facade components
- Installation of new compliant non-combustible cladding
- Window repair and replacement
- Concrete and render repair
- Scaffolding and access
- Compliance certification
Where we operate
