

# MINING SERVICES

Bringing our full resources to daily mining challenges

# We live for the challenge

**SRG Global is an engineering-led specialist construction, maintenance and mining services group built to solve complex problems across the entire asset lifecycle.**

SRG Global was born out of Australia's greatest ever engineering and construction challenge, the Snowy Mountains Hydro-electric Scheme, in 1961. Today, we are an ASX listed company bringing a unique engineering mindset to every construction, maintenance and mining project we touch.

Our specialist technical capabilities, diversified services and global experience working on iconic skyscrapers, bridges, dams, structures, transport infrastructure, mining and oil and gas projects, means there is no complex challenge we can't resolve.

Working across the entire asset lifecycle, we provide bespoke engineer, construct and sustain solutions, meaning you only ever need one partner. We're also self-performers because our team incorporates every discipline and skill required to meet the challenges our customers set.

Few specialist services companies have amassed the same knowledge, developed as many innovations or worked on as many world-class projects as we have. As a result, we have some of the best technical minds and problem solvers, supported by a culture that encourages out of the box thinking and people working together to push boundaries on what's considered possible.

We are also relentless in the way we deliver. We know that people's lives depend on us executing with absolute precision, which is why we never compromise on our systems, processes and safety standards.

We are SRG Global and we're up for the challenge.

# Bringing our full resources to daily mining challenges

## What we do

SRG Global is the only drill and blast contractor that can also offer an integrated range of complementary technical services to significantly improve safety and productivity on your mine site.

Working in the gold and precious metals, coal and iron ore mining sectors across Australia, SRG Global brings a uniquely adaptive approach to drilling and blasting, driven by our engineering heritage.

We are flexible in how we work, execute drilling programs with precision and respond confidently to challenges that arise in the open pit each day. It's part of who we are to continually investigate safer and more innovative ways of working, and to re-engineer our machines to optimise performance for each customer's mine site and minimise handling and risks to personnel.

We are also one of the only drill and blast contractors in Australia that can also seamlessly deliver ground support services on an as-needs basis. We also provide our valued clients with technology services customised to suit individual project requirements such as remote control drilling equipment or high precision GPS instruments.

**Design engineering**

**Scaffold and access solutions**

**Rope access**

## Key projects

# Drill and blast

## Production drilling with engineering precision

We provide production and resource definition drilling and blasting services, including engineering and design, across Australia.

We use state-of-the-art technology to relay real-time drill performance data so you can make quick decisions to optimise resources effectively for every hour of every shift. We also use High Precision GPS systems to ensure drilling accuracy and improved productivity, eliminating the requirement for on-ground surveying personnel.

We work with our clients to implement fully customised remote controlled systems across our drilling fleet to ensure safety to personnel by removing them from hazardous work environments. The equipment can be controlled from a safe distance and in some applications multiple machines can be controlled by a single operator.

## Production Drilling

SRG Global has a vast amount of experience in providing production drilling services, we understand the importance of quality control at this critical stage of the mining process. Our operational team will deliver optimal availability, ensuring high utilisation and a safe operating environment.

## Reverse Circulation

SRG Global undertake reverse circulation drilling programs to produce high quality representative samples for our customers. We customise our equipment according to project requirements to ensure accuracy of the grade control process.

## Blasting

SRG Global supplies the necessary skills and resources to undertake a whole range of blasting activities including production blasting, pre-split and final wall blasting, profiling and scaling, sensitive civil excavation and blasting engineering services.

## Horizontal / Depressurisation Drilling

SRG Global provide horizontal / depressurisation drilling to depths over 200 metres.

We can design and implement custom solutions for our clients, and like all of our drilling services, our specialist and custom solutions conform to our industry-leading standards for safety and quality.

## Health, Safety, Environment and Quality

SRG Global is committed to the highest levels of health, safety, environment and quality management in the way we conduct our business. We strive for zero harm across our operations and work together with regulatory bodies, clients and customers to achieve best practice in all aspects of our business and operations.

# Ground and slope stabilisation

## Open Pit

SRG Global has extensive experience in undertaking ground support and stabilisation works for mining clients. Typical works include wall stabilisation, rockfall protection systems, ramp protection, erosion control, geotechnical instrumentation, mesh drapes and netting, w-straps and cable lacing as well as shotcreting and fibrecruting.

## Mine Infrastructure

We provide ground and slope stabilisation works for mine infrastructure across the world including crusher pocket wall support, ground anchors for construction, void investigation / remediation and gabion and retaining walls.

## High Reach Drilling

SRG Global have specialist drill rigs that have been engineered in-house and are able to drill at a height of 20 metres to a depth of 20 metres. This specialist drilling equipment enables the safe delivery of ground support works and ensures minimal disruption to the mining operation. This is one example of how we make the complex simple for our clients.

# Scaffold and access solutions

## Overcome any access challenge

As a leading supplier and contractor of scaffolding and access solutions, we have the engineering skills, qualified and experienced personnel and material resources to tackle even the most complex access challenge.

We can design and supply scaffolding to any type and scale, as well as swing stages and mechanical access and provide rope access as an alternative to fixed scaffold. Large scale management packages for major projects in the oil and gas, resource or industrial sectors, include supply, storage, stock management, transport and maintenance of scaffold material at remote offshore and onshore locations.

## Rope Access

SRG Global has a team of experienced and trained rope access technicians who are available to provide a range of services on difficult to access structures or locations where scaffolding and other access solutions are too costly or not practical.

Aligned to internationally recognised standards through membership of IRATA, SRG Global employs comprehensive safety and quality management systems for the use of rope access techniques across drilling, geotechnical, industrial and construction projects.

## Scaffolders

SRG Global provide an on-site workforce of experienced scaffolders and riggers, wherever your project may be.

## Modular scaffold

SRG Global can provide modular scaffolding system (Kwikstage), A-frames, Ring Lock system, stair access and accessories.

## Swing Stages

Altrex swing stages, flexible configurations and accessories.

## Hoists

Material hoists, combi lifts, winches, 100kg to 3 tonne.

# Mine infrastructure

## **Engineering, construction and maintenance of critical mining infrastructure**

SRG Global specialises in the construction, protection and maintenance of critical mine infrastructure. With the specialist expertise to access difficult areas, the engineering expertise to understand the lifecycle of various structures, and the technical expertise to monitor your infrastructure over time.

## **Crusher pocket wall supports**

SRG Global provide crusher pocket wall support services for mines across Australia and have also completed these works in Panama and Zambia.

## **Mine Infrastructure Construction**

From cable stayed conveyors to bridge construction, SRG Global is able to offer mining customers the end-to-end solution for construction of critical infrastructure.

## **Monitoring of critical infrastructure**

SRG Global offer radar monitoring of mines utilising Reutech Mining's Movement and Surveying Radars. The services offer safer working environments through reduction of risk with the areas being monitored 24/7 in all weather conditions which can provide instantaneous safety alerts of live video feed.

# Industrial Services

## Streamlining the job of preventative maintenance

SRG Global has expansive capabilities across all aspects of industrial services, particularly mineral processing and heavy manufacturing facilities.

Tasks such as ultra high-pressure water blasting, refractory management and materials handling normally require several different contractors to handle each element of the job. SRG Global is unique in that we can self-perform almost every facet of preventative maintenance, including shutdown planning, access, industrial cleaning and rectification works.

We work quickly and efficiently, and when problems are encountered we have the engineering mindset and capability to overcome them without the need for outside intervention. The result is a safer and more cost-competitive service.

## High Pressure Cleaning

SRG Global has extensive experience in providing safe and efficient high pressure cleaning services throughout Australia and New Zealand. Our experienced Ausjet trained operators, comprehensive work methodologies and vast range of spare parts and accessories, ensures that equipment break down is minimised and the job is done in the safest and most efficient way possible.

## Monitoring

SRG Global offer radar monitoring of mines utilising Reutech Mining's Movement and Surveying Radars. The services offer safer working environments through reduction of risk with the areas being monitored 24/7 in all weather conditions which can provide instantaneous safety alerts of live video feed.

# Design Engineering

## **Solving your complex problems**

SRG Global's design department ensures sound engineering consideration in order to maximise the benefits for all projects in a project. We can offer design input from initial advice to fully detailed engineering design.

## **Drill and Blast Engineering**

SRG Global supplies the necessary skills and resources to undertake the whole range of blast design and consulting activities including production blasting, pre-split and final wall blasting, profiling and scaling and sensitive civil excavation.

## **Scaffold and Access Design Engineering**

SRG Global offers customers specific design and engineering services for scaffold. We can provide in-house design schemes specific for each project including engineering for final certification and approval, where required.
