

BUILDING

Taking the complexity out of building

We live for the challenge

SRG Global is an engineering-led global specialist asset services, mining services and construction group built to solve complex problems across the entire asset lifecycle.

SRG Global was born out of Australia's greatest ever engineering and construction challenge, the Snowy Mountains Hydro-electric Scheme, in 1961. Today, we are an ASX listed company bringing a unique engineering mindset to every construction, maintenance and mining project we touch.

Our specialist technical capabilities, diversified services and global experience working on iconic skyscrapers, bridges, dams, structures, transport infrastructure, mining and oil and gas projects, means there is no complex challenge we can't resolve.

Working across the entire asset lifecycle, we provide bespoke engineer, construct and sustain solutions, meaning you only ever need one partner. We're also self-performers because our team incorporates every discipline and skill required to meet the challenges our customers set.

Few specialist services companies have amassed the same knowledge, developed as many innovations or worked on as many world-class projects as we have. As a result, we have some of the best technical minds and problem solvers, supported by a culture that encourages out of the box thinking and people working together to push boundaries on what's considered possible.

We are also relentless in the way we deliver. We know that people's lives depend on us executing with absolute precision, which is why we never compromise on our systems, processes and safety standards.

We are SRG Global and we're up for the challenge.

Taking the complexity out of building

What we do

We can provide a fully-integrated structural, post-tensioning and facade construction solution to streamline your building project.

SRG Global have worked on some of the world's most challenging building projects. From groundbreaking skyscrapers such as the Emirates Tower in Dubai, to major hospitals, shopping centres, bridges, roads and other critical infrastructure across the world. We provide a comprehensive package that includes, solving problems around how to construct more efficiently and cost effectively, to specialist technical expertise, innovative technology and equipment and a highly skilled, competent workforce.

Form Reo Pour

We're the one contractor who can do it all

SRG Global's building service includes all facets of modular formwork systems, including wall formwork, column formwork and falsework. Complemented with the reinforcement placement, post-tensioning, concrete pumping and placement.

Our expertise in formwork, including slipforming and slab engineering, along with our end-to-end capability and our capacity to develop smarter solutions, means that we are able to offer an all encompassing solution for our customers.

Formwork Contracting

By offering equipment, contracting, and subcontracting services, SRG Global can supply an all inclusive formwork and concreting package. Our mix of Australian and International equipment coupled with both our experienced on-site

workforce and innovative work practices enable us to complete structures faster, safer and more cost effectively.

SRG Global can provide dry hire or sale on all its equipment as well as packaged concrete contracting solutions for formwork, concrete pumping, and concrete placement. Above all, we offer our clients reliability, flexibility and experience in formwork and concrete construction.

Concrete Pump and Place

SRG Global's capabilities include the supply of concrete to site, along with the provision of our on-site concrete finishing teams. These teams are fully proficient in the workability of various concrete mixes and specialised aggregate finishes. Our concrete delivery personnel work hand in hand with our formworkers to ensure pour rates never exceed the design of the formwork system.

Wall and Column Formwork

SRG Global provide a range of wall formwork products including peri trio, soldier systems and bar tie.

Column formwork products provided includes modular systems and plastic forms in all shapes and sizes.

Falsework and Propping

SRG Global provide a range of falsework and propping products including peri skydeck, shoring frames and multi props.

Timber and Plywood

SRG Global provide plywood, LVL timber and edgeform.

Facade Design and Construction

Finish your building to the highest quality

SRG Global's dedicated Facade division provides bespoke architectural facade and curtain wall solutions to commercial and residential building projects, mixed use developments, apartments, office towers, shopping centres and general high-rise buildings. SRG Global Facades management team provides over 100 years combined experience in the Facade Design and Construct industry. Our direct relationship with our offshore manufacturers provides us with in-house control of our supply chain and ensures experience and compliance with our stringent quality and safety standards.

Design and Certification

SRG Global provide detailed design and construction drawings. SRG Global offer design assistance to architects and clients providing input at the early design stage to facilitate an economical design solution for each individual project. Our engineering design

and certifications are provided by local Australian building engineer certified practitioners. Technical and performance requirements of each project are addressed meticulously and performed in accordance with project specifications and Australian Standards.

SRG Global also undertake thermal analysis of our facade systems to ensure a high level of sustainability in our buildings. Our systems incorporate thermal separation of facade components between internal and external where necessary to obtain the required internal conditions and optimum energy efficiency.

Installation

SRG Global's Facade division installs all aspects of facades including curtain walling, glass panelling, aluminium systems, podiums, shop fronts, main entrances and atriums.

SRG Global provide on-site project management and supervision, HSEQ, logistics and coordination and skilled onsite workforce.

Cladding Replacement

SRG Global's Facade Refurbishment division provide a complete end-to-end solution for cladding replacement projects including design, engineering, testing, manufacture, access and installation services ensuring the upgraded facades meet the highest standards, removing faulty or damaged cladding.

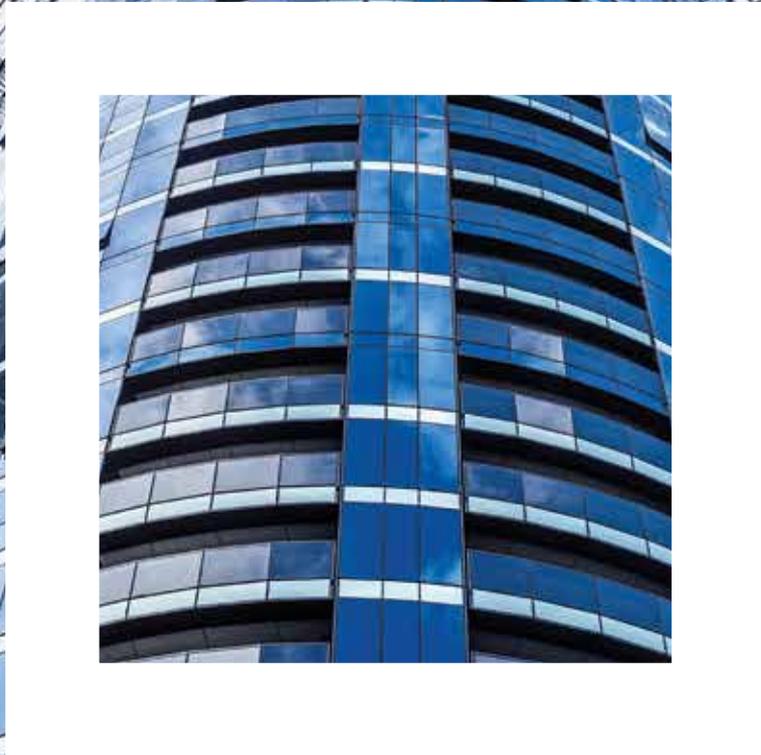

Specialised Equipment

SRG Global own and operate specialised plant and equipment for facade projects including cranes, vacuum units, glazing robots, boom lifts and scissor lifts.

Maintenance and Cleaning

SRG Global also undertake facade maintenance and cleaning ensuring the highest quality workmanship.

Post-Tensioning

World leaders in post-tensioning technology

SRG Global are one of the world leaders in this technology, which enables faster construction, a reduction in reinforcement, thinner and more economical slabs, larger floor spans and fewer columns.

Our in-house construction design capacity allows us to customise every project. We investigate multiple paths to reducing slab thickness, reinforcement use and construction times. Optimising the design for both concrete and steel usage saves time and money and minimises environmental impact.

Customers choose SRG Global because we are able to provide smart and efficient solutions to difficult problems, drawing on a depth of operational experience unparalleled in our industry.

Slab Post-Tensioning

Our slab post-tensioning systems offers all stakeholders in a building project many benefits including reduced structure depth, greater clear spans, design flexibility, formwork versatility, reduced construction costs, enhanced construction speed, improved durability, minimum maintenance costs and reduced carbon footprint due to less concrete and steel required.

Bar Post-Tensioning

Our bar post-tensioning systems are ideal for the economic application of post-tensioning forces on relatively short tendons. Through the use of threaded connections and anchorages they are simple to use and lend themselves to many applications.

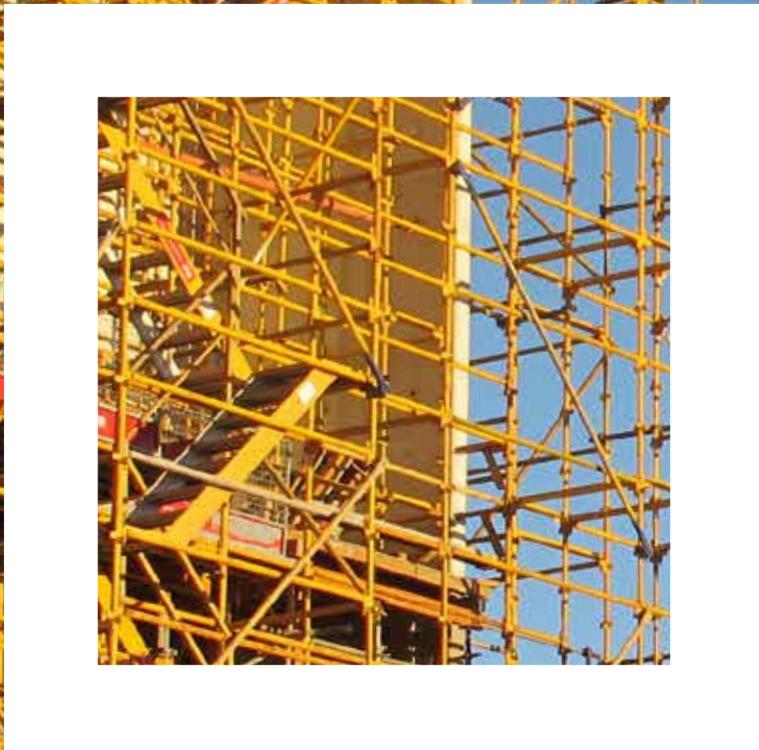

Typical bar post-tensioning applications are buildings, bridges, wharves and jetties, soil and/or rock anchors and specialist engineering.

Corrosion Protection

All bars and fittings must be protected from corrosion when installed under permanent conditions. In normal concrete construction the use of galvanised duct injected with grout provides excellent protection. Anchorage recesses must also be filled with cement mortar to protect these ends.

Scaffold and Access Solutions

Overcome any access challenge

As a leading supplier and contractor of scaffolding and access solutions, we bring the engineering know-how, the skilled workforce and material resources to tackle even the most complex access challenge.

We can design and supply scaffolding to any type and scale, as well as swing stages and mechanical access, and provide rope access as an alternative to fixed scaffold. Large scale management packages for major projects in the oil and gas, resource or industrial sectors, include supply, storage, stock management, transport and maintenance of scaffold material at remote offshore and onshore locations.

Rope Access

SRG Global has a team of experienced and trained rope access technicians who are available to provide a range of services on difficult to access structures or locations where scaffolding and other access solutions are too costly or not practical.

Aligned to internationally recognised standards through membership of IRATA, SRG Global employs comprehensive safety and quality management systems for the use of rope access techniques across drilling, geotechnical, industrial and construction projects.

Scaffolders

SRG Global provide an on-site workforce of experienced scaffolders and riggers, wherever your project may be.

Scaffolding

We offer a complete range of scaffold equipment and a specialised workforce to customers in all market sectors. Our experienced industry professionals utilise customised management packages to deliver projects on time and on budget.

SRG Global's innovative operational systems can facilitate any obstacle, including off-shore requirements and satellite yards to the most remote parts of Australia.

We provide

- Modular scaffold (Kwikstage)
- Ringlock scaffold
- Tube and clip
- Aluminium scaffold including atrex rolling towers, folding units and spandeck.

Structure Packages

Streamlining the way you build

Our unique industry offering is to bring together all of our core capabilities and offer a fully integrated structure package on key projects. This allows for a complete, uncomplicated, streamlined, cost-effective offering that has not previously been available in the construction industry.

Design Engineering

Our design department ensures sound engineering consideration in order to maximise the benefits for all stakeholders in a project.

Post-Tensioning

We are leaders in post-tensioning technology which enables faster construction, a reduction in reinforcement, thinner and more

economical slabs, larger floor spans and fewer columns. Packaging post-tensioning elements of a building construction together with form, reo, pour, scaffold and access as well as facade construction means you only have to deal with one contractor for your complete structure package solution.

Form Reo Pour

Acknowledged as concrete specialists, SRG Global offer all facets of formwork, including wall formwork, column formwork and falsework, reinforcement placement and post-tensioning, concrete pumping and placement.

Facade Construction and Installation

Our dedicated Facades division provide bespoke architectural facade and curtain wall solutions

to commercial and residential building projects, mixed use developments, apartments, office towers, shopping centres and general high-rise buildings.

Scaffold and Access Solutions

As a leading supplier and contractor of scaffolding and access solutions, SRG Global has the engineering skills, qualified and experienced personnel and material resources to tackle even the most complex access challenge.

Design Engineering

Solving your complex problems

SRG Global's design department ensures sound engineering consideration in order to maximise the benefits for all stakeholders in a project. We can offer design input from initial advice to fully detailed design for construction drawings.

SRG Global provide the complete package, from solving problems around how to construct more efficiently and in less time, to specialist technical expertise, innovative technology and equipment. This means you can leave us to get on with delivering the finished building.

Post-tensioning Design Engineering

The design of post-tensioned suspended slabs requires sound engineering knowledge in order to maximise the benefits for all stakeholders in a project.

SRG Global can offer design input from initial advice to fully detailed design for construction drawings.

Form Reo Pour Design Engineering

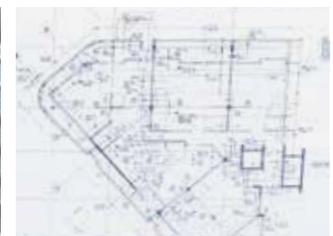

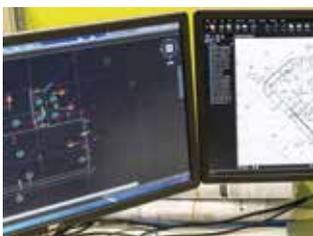

SRG Global offers customers specific design and engineering services for formwork and concreting. We can provide in-house design schemes specific to each project including engineering for final certification and approval where required.

Facade Design and Construction

SRG Global's dedicated Facades division has experienced industry professionals and design engineers who are multi-disciplined and can offer innovative construction solutions.

Scaffold and Access Design Engineering

SRG Global offers customers specific design and engineering services for scaffold. We can provide in-house design schemes specific for each project including engineering for final certification and approval.
